The Maintenance and Engineering departments at SJVC are passionate and excited about the great steps taken towards achieving the perfect plant.

The Maintenance and Engineering team members are: Robert Greco, Miguel Garcia, Jaime Cantor, Joseph Gilmore, Anthony Landeros, Gerardo Lira, Elisa Guiba, Cesare Dianna, and Paul Smith.

In the last 5 years the SJVC facility has been growing by installing various pieces of equipment such as the Wiegand Evaporator, Membrane #4 system, Pasteurizer #3, the Control Room (computerized network to operate various equipment and processes), among others with more to come in the near future.

The team mentioned above has put in long hours and a lot of effort to design equipment and execute the installation of each piece, overcoming the challenges that the production requirements present.

Each piece of equipment that has been designed, installed, or upgraded has delivered above expected results.

An example: MCD Dryer #2 has delivered above 10% of expected yield and the team is still working to increase yield even more.

The Maintenance and Engineering teams have made the effort and contribution towards our goal of 100% perfection to our customers all the time.
